SUMMARY

Seeking a six-month, full-time final-year internship in South Korea, starting in early March 2027

Final-year software engineering student at EPITECH, with two backend development internships. I build full-stack applications, APIs and Python tools integrating large language models. Following an academic exchange at Inha University, I would like to build on my experience in South Korea by contributing to software projects in a professional environment.

SKILLS

Languages
Python • TypeScript • JavaScript • C • C++ • SQL

Backend
FastAPI • Symfony • REST APIs • OpenAPI • asyncio

Frontend
React • Next.js • Tailwind CSS

Artificial Intelligence
LLM integration • AI agents • RAG • Vector search

Databases
PostgreSQL • SQLite • Supabase

Tools
Git • Docker • Linux • GitHub Actions

EXPERIENCE

Apimo (Apiwork) Cannes, France
Backend Developer Intern April 2025 – July 2025
Contributed to the redesign of the Apimo v2 REST API within the development team of a real estate software company.

- Designed and implemented user and contact management endpoints supporting GET, POST, PATCH and DELETE operations.
- Implemented business logic and validation rules in backend services using Symfony.
- Used Propel ORM for database operations and complex queries.
- Integrated OAuth2 authentication and role-based access control.
- Refactored existing endpoints and developed reusable components to improve API consistency and maintainability.
- Participated in Agile development cycles, including sprint planning, reviews and team collaboration.

Apimo (Apiwork) Cannes, France
Backend Developer Intern July 2023 – December 2023
First professional experience within the backend team of a real estate software platform used by more than 5,000 agencies.

- Contributed to the development and improvement of backend features.
- Helped develop internal tools in collaboration with the development team.
- Worked in an Agile environment organized around sprints, with guidance from experienced developers.

LANGUAGES

French

EDUCATION

EPITECH – European Institute of Technology Expert in Software Engineering • French RNCP Level 7 qualification
Software engineering Paris, France • 2022 – 2027
Five-year, project-based program focused on practical software development. Qualification expected in 2027.

- Developing skills in programming, technical problem-solving and application design.
- Learning through independent work, experimentation and peer collaboration to build and improve software solutions.

Inha University Academic Exchange Program
Computer Science / Software Engineering Incheon, South Korea • 2025 – 2026
Academic exchange undertaken as part of the EPITECH curriculum, focused on computer science and software engineering.

- Coursework in Python, C and C++ programming, as well as database design.
- Experience studying and living in South Korea within an international academic environment.

National Student-Entrepreneur Status (SNEE) Nice, France • 2026 – 2027
Entrepreneurial project: Frameclue

Development of an application for analyzing video creatives using artificial intelligence.

PROJECTS

FlashCardStudy – Language Learning Platform 2026
Developed a full-stack language-learning application for creating personalized flashcard sets, organizing learning content and tracking progress.

- Built the user interface with Next.js, React and TypeScript.
- Integrated authentication and data management using Supabase.
- Implemented progress tracking and drag-and-drop content organization.

Technologies: Next.js, React, TypeScript, Supabase, Tailwind CSS

Python Doc Generator 2026
Developed a command-line tool that analyzes Python repositories to generate Markdown documentation, including project overviews, architecture descriptions and API references.

- Analyzed repository files and code structure to extract relevant context for documentation.
- Integrated my Python RAG Framework and Python Agent Runtime libraries for context retrieval and documentation generation.
- Added repository question-answering commands and configuration options for generated content.

Technologies: Python, CLI, RAG, AI agents, Markdown, MkDocs

Python Agent Runtime 2026
Designed a modular Python library for running AI agents with tool calling, memory management and streaming responses.

- Structured the runtime around dedicated components for tools, conversation history and prompt construction.
- Developed interfaces for connecting language models, including an OpenAI adapter and Pydantic-based configuration.
- Added optional integration with Python RAG Framework to enrich requests with relevant document context.

Technologies: Python, Pydantic, OpenAI, RAG, MkDocs

Frameclue 2026 – Present
Developing an application that uses artificial intelligence to analyze video creatives and generate structured reports to help identify the next creative tests to run.

- Built the user interface and HTTP backend with Next.js App Router, React and TypeScript.
- Implemented account, data and video file management using Supabase PostgreSQL, Auth and private Storage.
- Integrated the Google GenAI SDK on the server to analyze videos and generate reports.
- Orchestrated analysis tasks using Vercel Workflows.
- Defined and validated analysis outputs using TypeScript/Zod contracts and derived, versioned JSON schemas.

Technologies: Next.js, React, TypeScript, Tailwind CSS, Supabase, Google GenAI, Vercel Workflows, Zod
Testing & CI: Vitest, Playwright, GitHub Actions
